1. Introducing AWWCE ERP

AWWCE ERP is a modular and centralized Information System connecting all department data and works together as a unit. AWWCE ERP includes modules for Human Resource, Financial management, Procurement management, Inventory Management, Project management, Fleet management and Plan and budget management.

The user Guide introduces you to System configuration and other tools that are common to all AWWCE ERP modules.

1.1. Starting AWWCE ERP

This gives instructions for signing on to AWWCE ERP and starting applications from a web browser, you can open and use AWWCE ERP Application from a web browser.

To use AAWCE ERP from a web browser, you need user name /ID and password connect to AWWCE ERP server using any web browser. To access the AWWCE ERP server using a web browser, specify the uniform resource locator (URL) address of the server in the browser navigation bar. This can be the URL address of AWWCE ERP Application or a URL address like http://localhost/ or (https://192.168.1.3/ that you have received from System Administrator.

1.1.1. Opening AWWCE ERP from your web browser:

1. Open your web browser
2. type the URL address of the AWWCE ERP server into your browser Address bar.
3. AWWCE ERP login window appears.

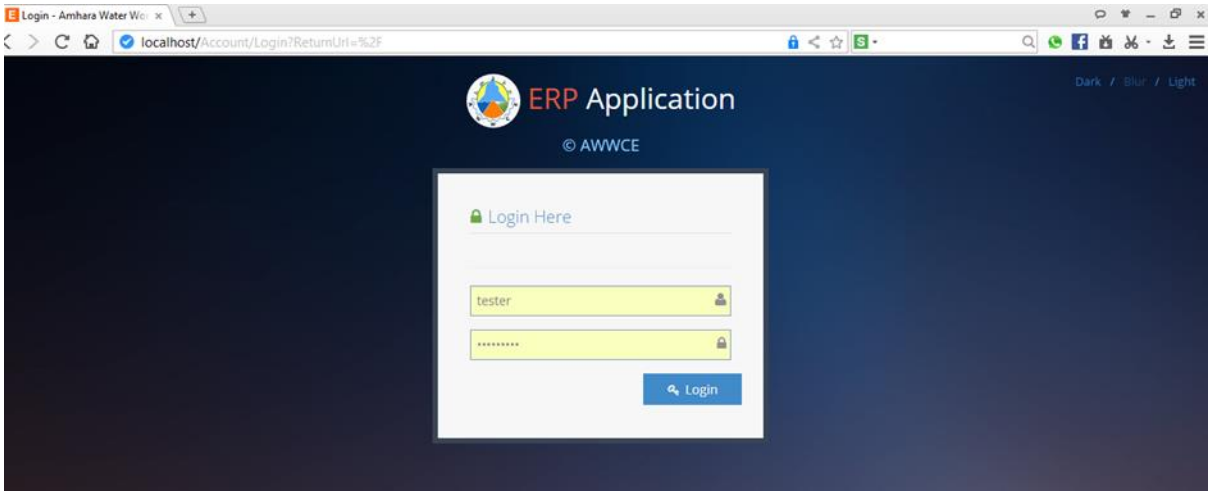

Figure 1: AWWCE ERP **login window**

4. Enter your valid username and password, the username and password combination can be those provided by System Administrator.
5. then click **Login button**, AWWCE ERP Window appears:

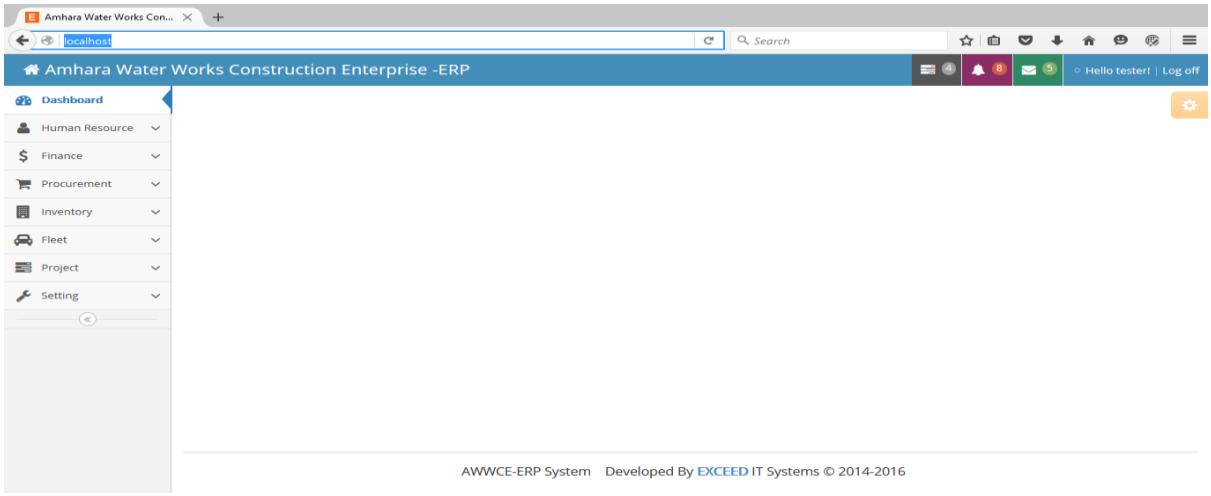

Figure 2: AWWCE ERP **window**

1.1.1.1. AWWCE ERP Windows

After you Login, the AWWCE ERP appears as shown next:

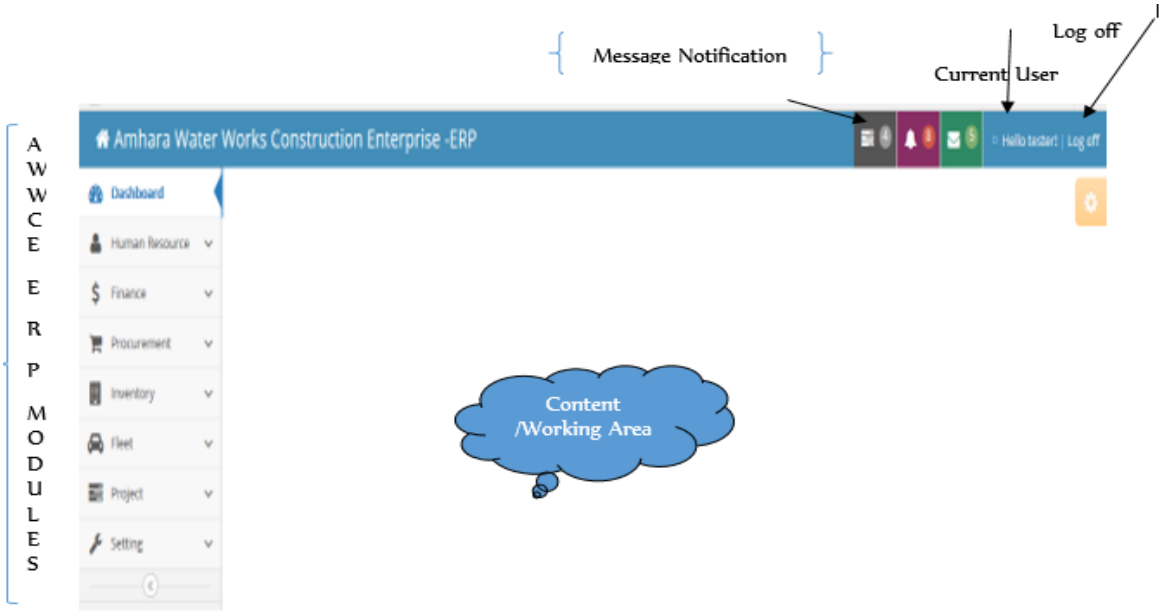

Figure 3: AWWCE ERP **window Element**

Settings

Settings are programs used by System administrators. You see the Icon for **Settings** if you are system Administrator or have been given the authority to have this privileges. Otherwise, you do not need to be concerned with Settings.

Using AWWCE ERP Dashboard

AWWCE ERP Dashboard is a link for HR, Finance, Fleet, Project, etc. with Charts, graphs, gauges and summaries that measure your organization's key performance indicators. Users must belong to a security group that has been assigned Dashboard security permission.

AWWCE ERP Folders/Modules: displays all installed modules with links to different list of Forms.

Contents: this displays the contents of each sub modules/forms and dashboard

Message Notification/Alert: shows/ notifies new task to be send to users or alerts specific action to be taken before is period expires

Current User: display the name of user currently login to the system

Log Off: used to log off/sign off from the system

Add New ✚ : used to add new record to the system/database

Edit button: is used to edit data on the form

Detail button: is used either to add additional information to the form or to view detail information about a specific record

Delete button: used to delete a record from a form /database

1.1.2. Closing AWWCE ERP Application from your browser

i. when you are ready to close the Application Database Logoff button at the right top corner of the window that returns you login page, the close your browser.

2. Financial Management System

This system manages all the financial aspects of Enterprise, which is more concerns about gathering, recording, analyzing, interpreting, and communicating information of an organization's financial performance and risk. This system should be designed to enable the finance team to manage their daily activities and to generate timely financial reports

The major functions within the Finance Management system modules are account payable, account receivable, fixed asset management, bank reconciliation, general ledger and payroll management. General features of the system:-

- Maintains separate journals for accounts payable, accounts receivable, inventory control and payroll for streamlined report generation.
- The resource incurred on budget collection, balance adjustment and payment related matters are improved.
- Maintaining of accounts and balance adjustment are done instantly.
- Maintains vital credit information that provides you with detailed payment information like average days to pay and full account history.
- Generating formal and custom reports for the purpose of auditing is simple and effective.
- Managing the organization's financial loan and debt is efficient and effective.
- Preparing various letters and generating reports is fast, accurate and cost effective.
- Keeping track of payments for goods and services is efficient and effective.
- Budget plan preparation is more efficient and effective.
- Preparing financial statements
- Managing remissions, write-off and fees, and charges is efficient.

The following table provides links to collections of information about the core tasks that are performed in the Finance and Payroll System.

Topic /Forms	Description
General Ledger	Ledger sub system maintains current financial information, as well as transaction history and budget information
Accounts receivable	Maintain customer accounts, enter or import transactions from various sources and print invoices. Tracks open item accounts and produces monthly statements, Generate Customer Aging Reports using different user-defined aging periods, it records customer invoices or sales transactions on account
Accounts payable	handles all your payable record-keeping and reporting needs, used to setup and maintain Consultant's accounts, enter or import transactions from various sources and print checks.

Fixed assets	Registers assets, creates budgets for depreciation and correcting budgets for assets and used to administer assets of the enterprise
Payroll	Preparation of Payroll includes calculations for leave/absence, hours worked, overtime, bonuses and commissions, contributions, deductions and taxes
Report	produces numerous auditing and processing reports, as well as financial statements.
Setting	Provides information about predefined common parameters of the system.

2.1. Setting up Common Parameters

Provides information about predefined common parameters of the system

2.1.1. Create Country

- Choose the Countries icon from the Setting folder to display the GL country registration Form

Figure 4: Country entry Form

- Click **Finance > Setting > Countries**
- Click **Add Button** to open GL country registration Form
- Enter the **name of the country** you want to register
- Enter **description** about the country
- Click **Save** button to save and exit the form

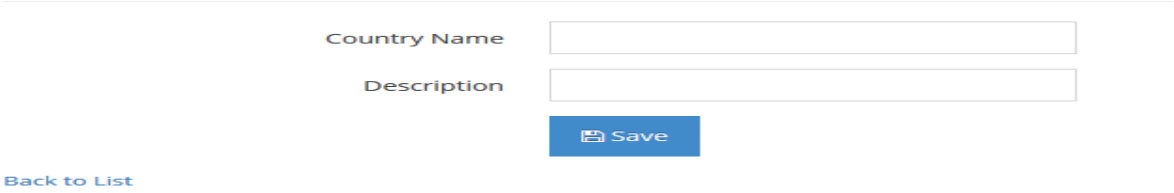

Figure 5: Country Registration Form

2.1.2. Create New Fiscal Year

- Choose the Fiscal Year icon from the Setting folder to display the Fiscal Year registration Form
- Click **Finance > Setting > Fiscal Year**

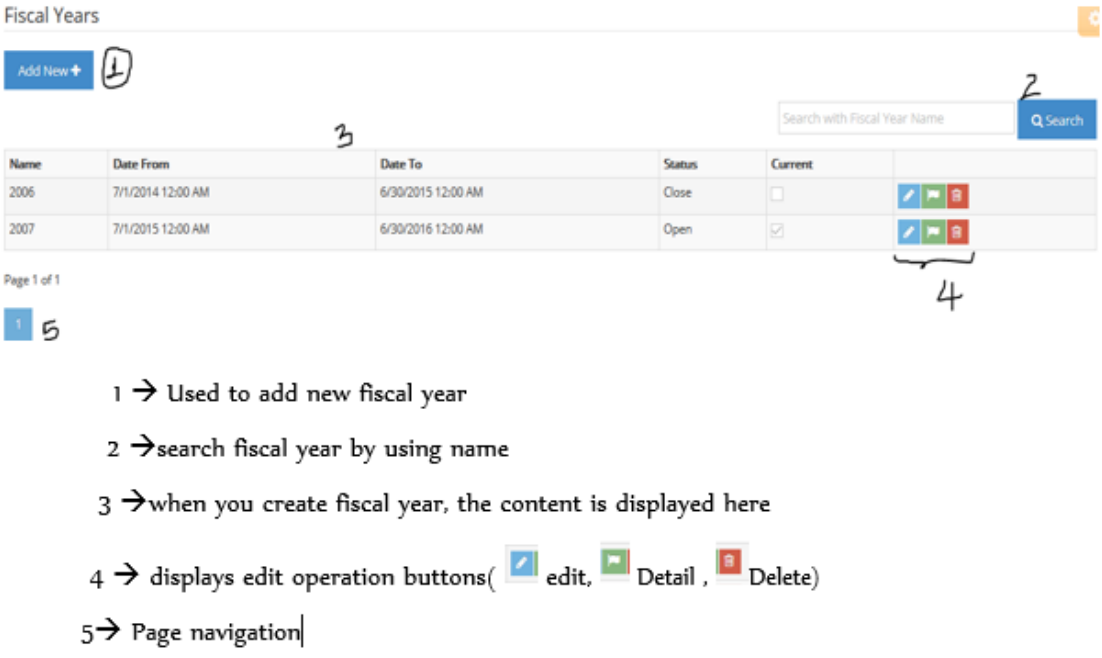

Figure 6: Fiscal Year Form

- After opening the Fiscal Year Entry form, Click **Add New Button**

- Enter the **Year** of accounting
- Enter **start date** for the fiscal year
- Enter **end date** of the fiscal year
- Enter **status** for the fiscal year
- Click **Save** button to save and exit the form

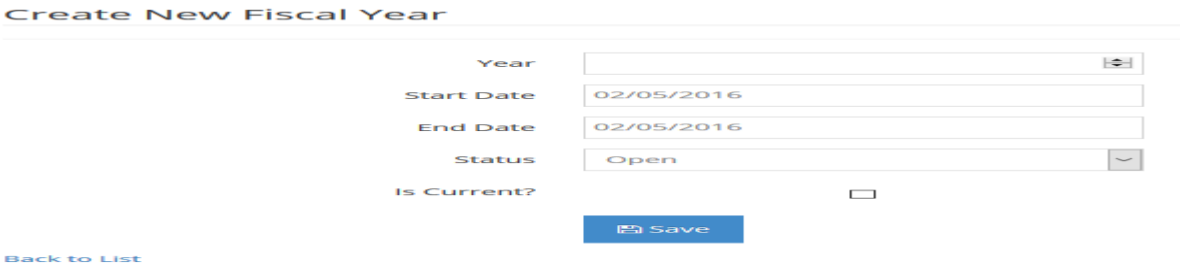

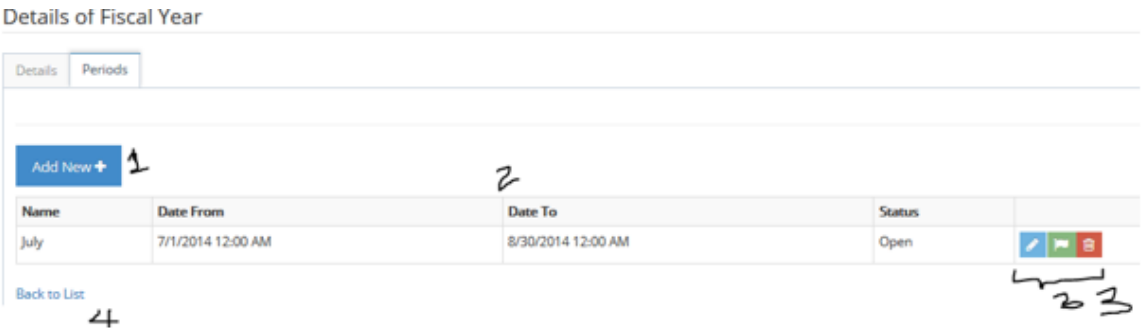

Figure 6: Fiscal year Registration Form

2.1.3. Create New Period

- Click **Finance > Setting > Fiscal Year > Details > period**

1 → Used to add new period

2 →when you create period, the content is displayed here

3→ displays edit operation buttons(edit, Detail , Delete)

4→ used to return back to previous page

Figure 7: Fiscal year Registration Form

- After opening the Fiscal Year Entry form, Click **Add New Period**
- Enter the **name** of accounting period
- Enter **start date** for the accounting period
- Enter **end date** of the accounting period

- Enter **status** for the accounting period
- Click **Save** button to save and exit the form

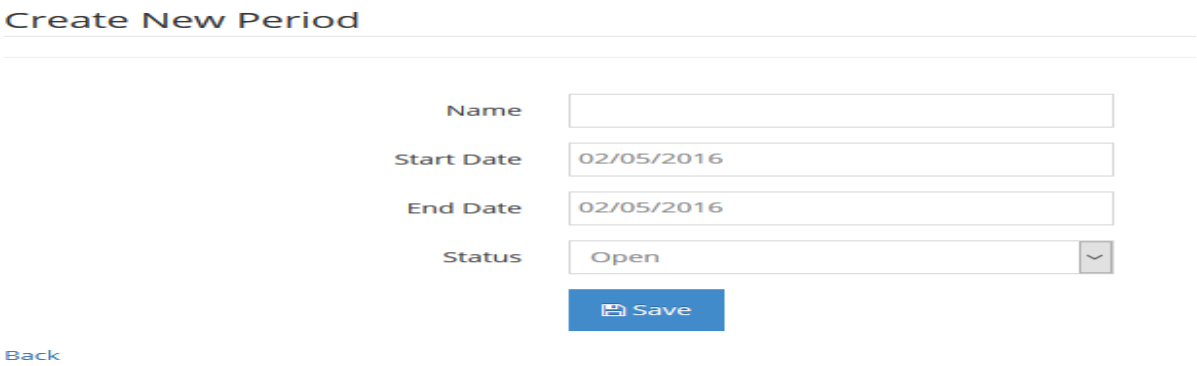

Figure 8: New accounting period window

2.1.4. Create New Currency unit

- Click **Finance > Setting > Currency**

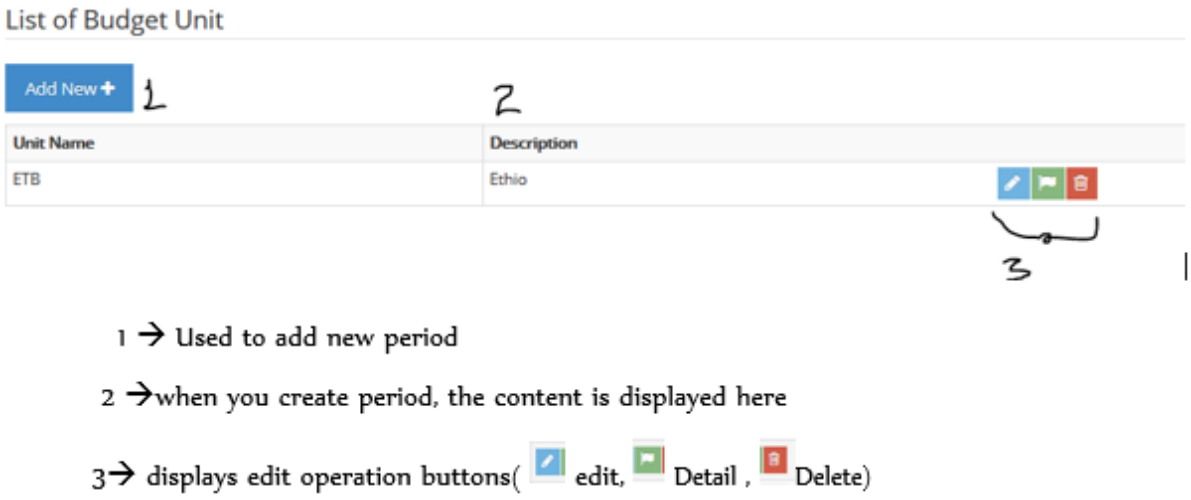

Figure 9: New currency window

- After opening the Currency Entry form, Click **Add New Currency Button**
- Enter the **name** of accounting period
- Enter **start date** for the accounting period
- Click **Save** button to save and exit the form

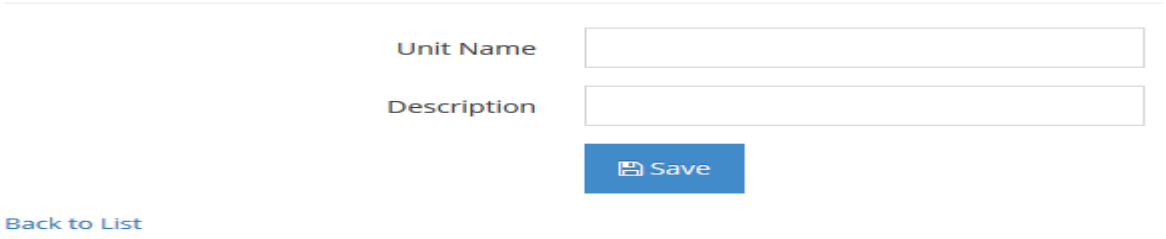

Figure 10: currency registration form

2.1.5. Create New Payment Term

- Click **Finance > Setting > Payment Term**

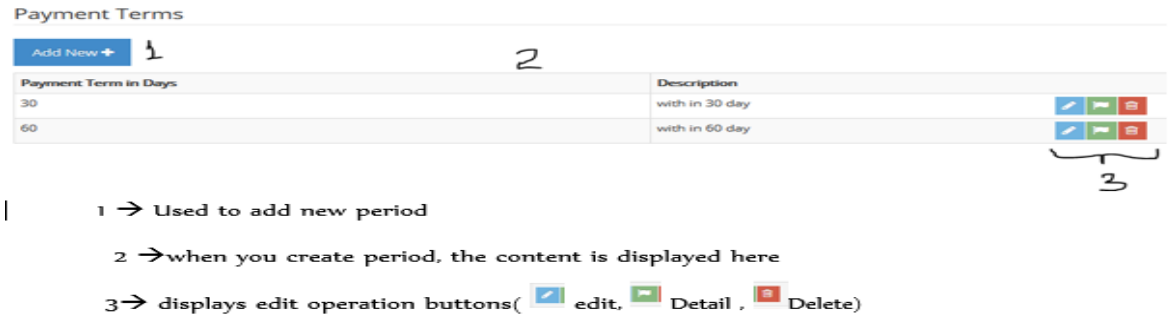

Figure 10: Payment Term registration form

- After opening the Currency Entry form, Click **Add New Payment Term** Button
- Enter the number of days for **payment term**
- Enter **description** for the payment term
- Click **Save** button to save and exit the form

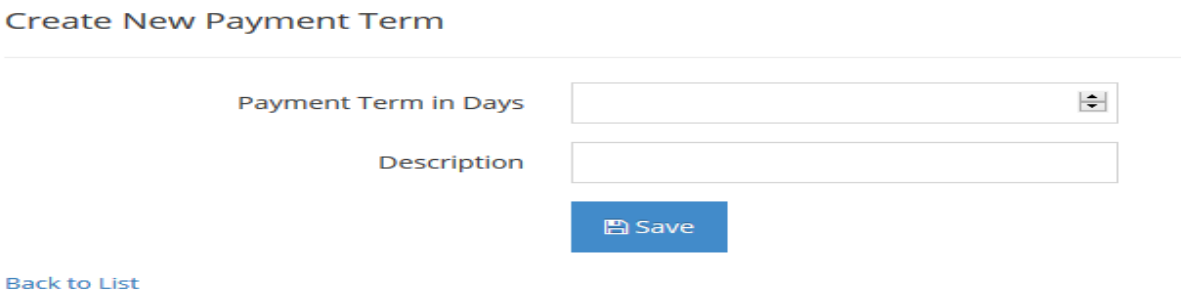

Figure 11: Payment term window

2.1.6. Create New Payment Method

- Click **Finance > Setting > Payment Method**

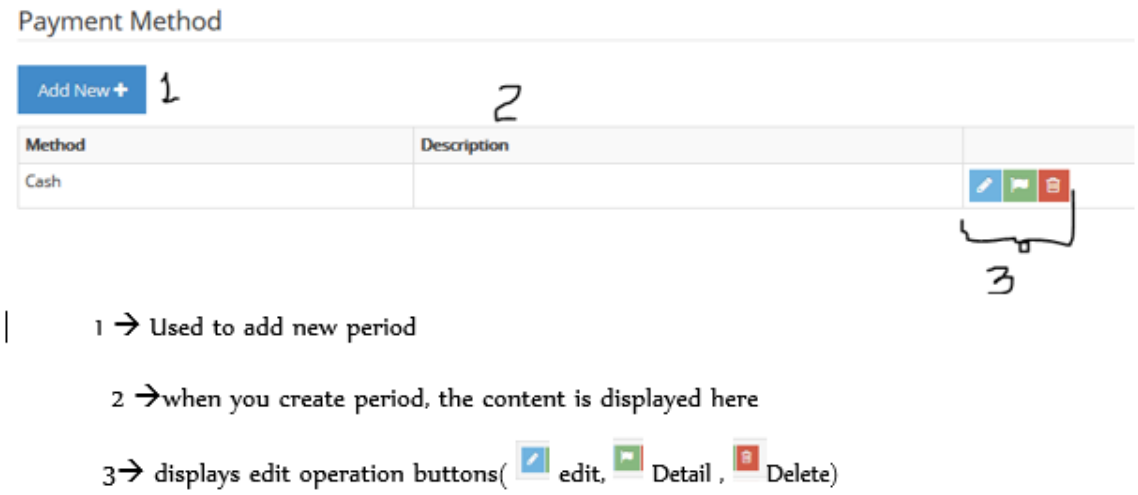

Figure 12: Payment Methods window

- After opening the Currency Entry form, Click **Add New Payment Method** Button
- Enter the **payment Method**
- Enter d**escription** for the payment Method
- Click **Save** button to save and exit the form

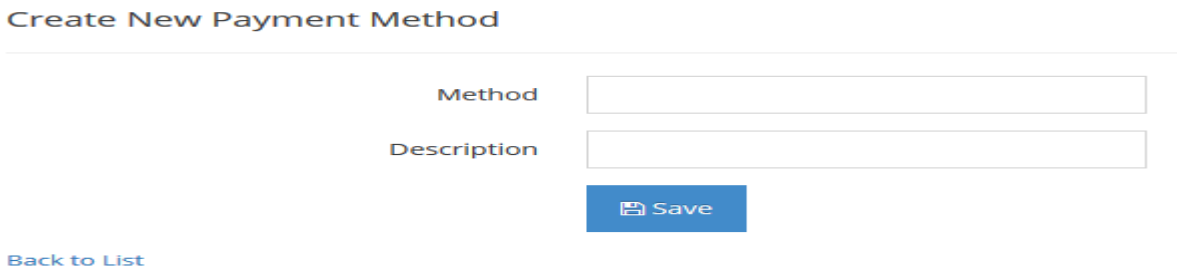

Figure 13: Payment Method Registration form

2.1.7. Create New Bank Account Name

- Click **Finance > Setting > Bank Account Name**

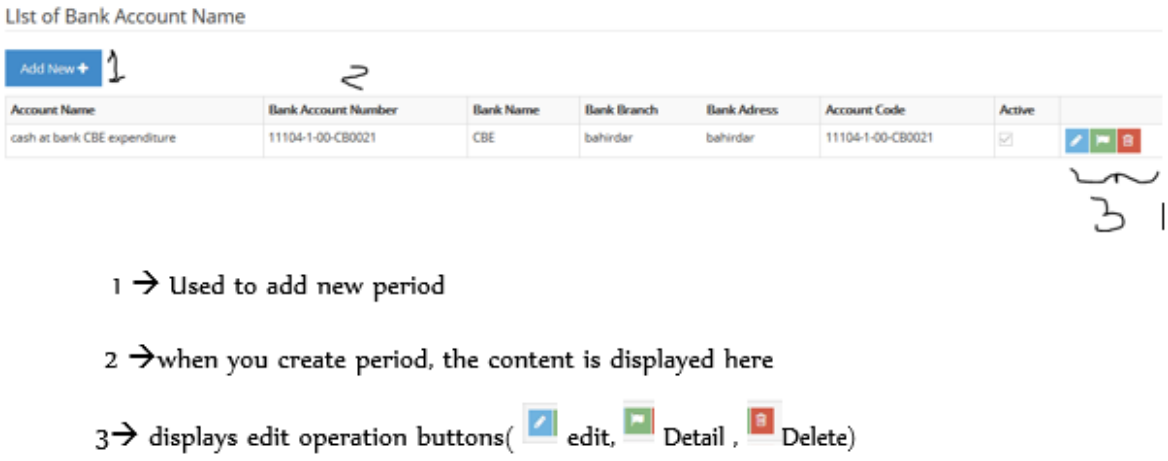

Figure 14: Bank Account form

- After opening the Bank Account Entry form, Click **Add New Bank Account** Button
- Enter the **Name of the account**
- Enter **Bank account number**
- Enter **bank branch name** and **address**
- Choose **Account code**
- Enter description for **account code**
- Click Save button to save and exit the form

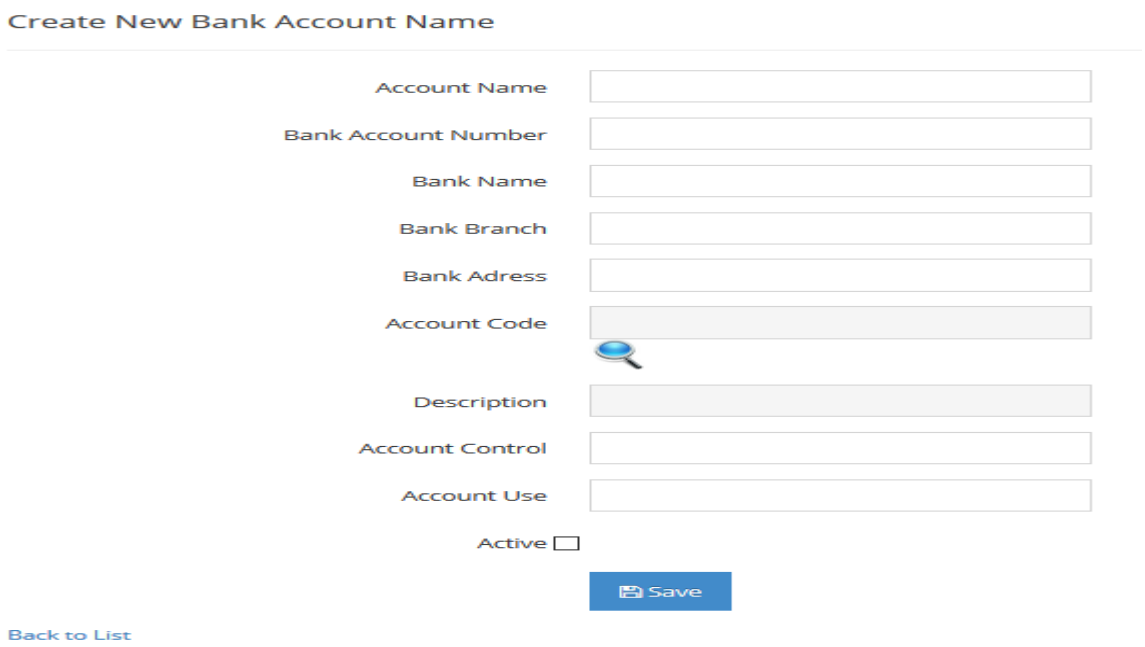

Figure 15: Account Name registration window

Reverse: is used to revers back an already approve journal record for editing

Figure 30: approve Journal record details form

2.3. Account Receivable

The Accounts receivable section allows you to keep close track of all sales and incoming payments from customers.

You can set up customer groups, customers, posting profiles, various payment options, interest notes, collection letters, commissions, parameters concerning customers and sales orders, prices and discounts, charges, supplementary items, deliveries and destinations, bills of exchange, and so on.

Depending on your setup, you can then perform many tasks that are related to customers and sales. Among other things, you can create and manage sales orders, sales quotations, and free text invoices, settle customer invoices, and make inquiries and reports about all data that is accessible in the Accounts receivable section.

With Accounts Receivable, you can manage your customers and fine-tune customer relations by keeping track of important sales information and outstanding balances. Accounts Receivable allows you to easily apply cash to outstanding invoices and create recurring charges for quick invoicing of monthly charges. Accounts Receivable is also fully integrated with Bank Services, for complete bank reconciliation.

Topic /Forms	Description
Customers	Provides procedural information to enter new and modify existing information about your customer's profile
Invoice	Provides procedural information to Create or maintain invoicing information for the selected customer.
Miscellaneous Collection	Provides procedural information to Create or maintain collection information for the selected customer.

Customer Types	Provides procedural information to Maintenance to create a unique identifier or short name for the customer group.
Set up Tax Types	Provides procedural information to create /maintain tax types
Setup transaction class	Provides procedural information to maintain different types of transaction classes
Setup transaction Type	Provides procedural information to setup collection of transaction
Setup product Accounts	Provides procedural information to create product account transactions

2.4.1.8. Create New Payable Account

- Click **Finance > Account Payable > Setup Payable Account**

1 → Creates **Add New payable account description** entry form for data entry

2→ displays previously registered **payable account**

3 → displays editing operation buttons(edit, Detail , Delete)

Figure 60: Setup advance payment form

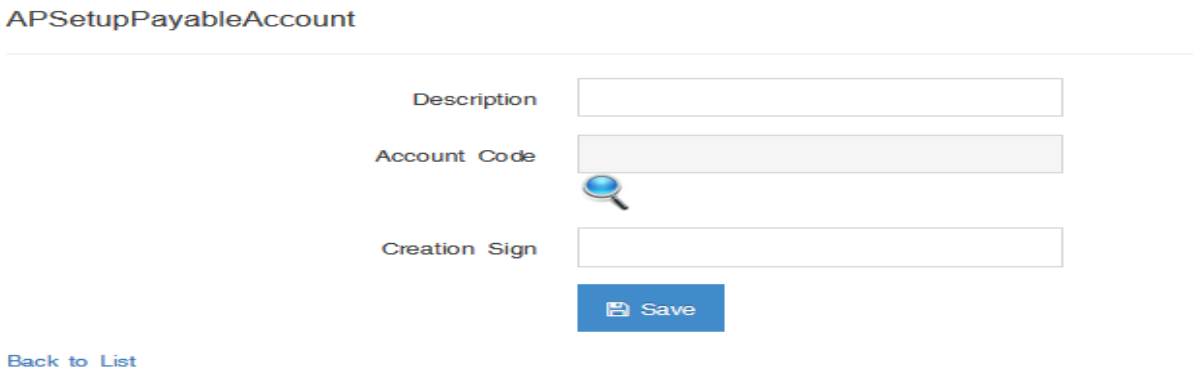

Figure 61: Setup advance payment registration form

2.4.2. Create New Payable Account

- Click **Finance > Account Payable > Supplier**

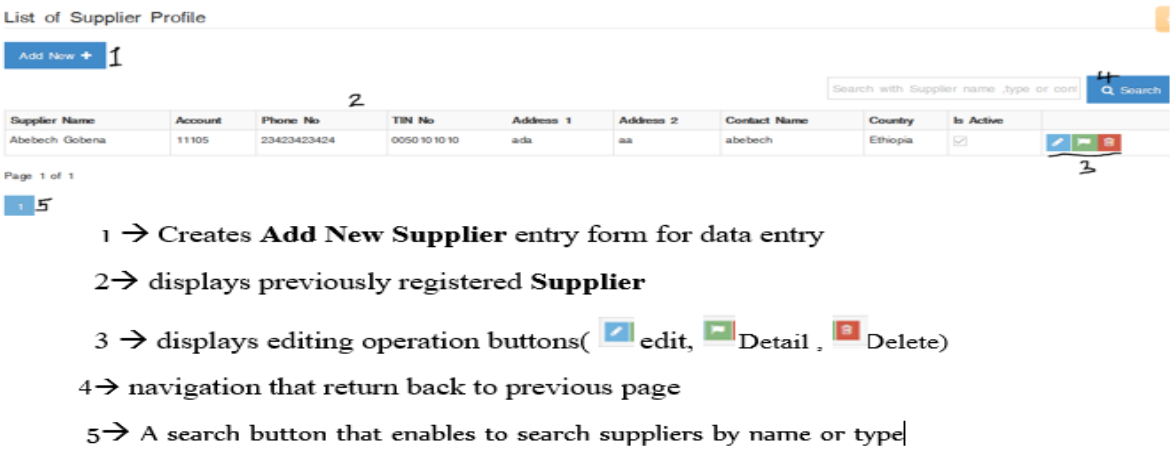

Figure 62: Suppliers registration form

- In the list of **supplier profile** form**,** Click **Add New supplier**
- In the create new **supplier** form**,** enter a supplier name
- In the **account code** field, select the **account code**
- Enter and choose all other mandatory field information in the supplier transaction form
- Click save to save the information and exit the form

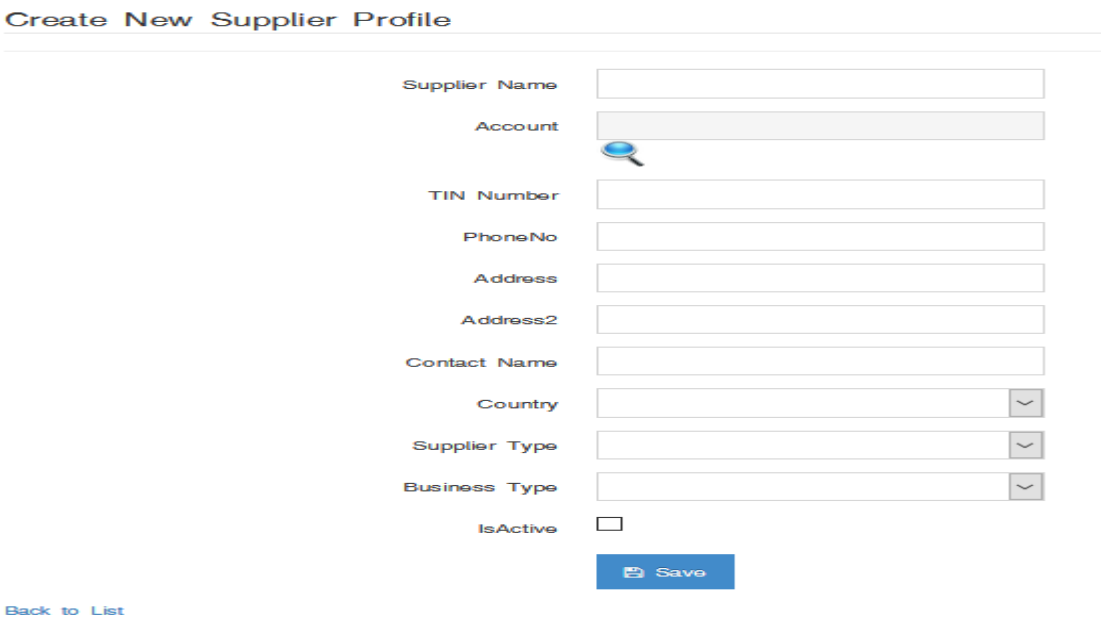

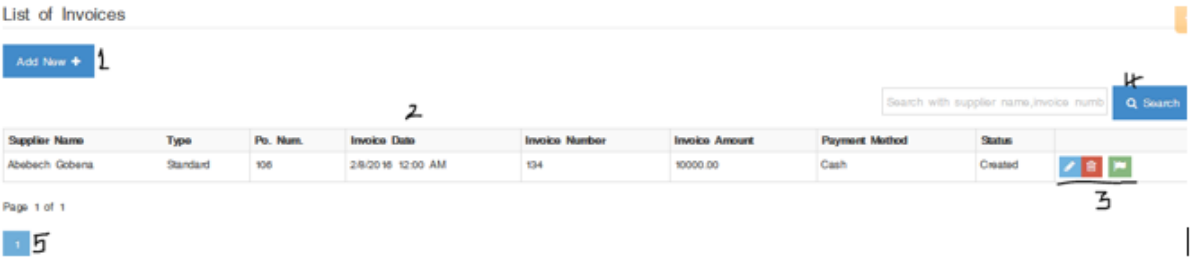

Figure 62: supplier profile registration form

2.4.3. Create New Invoice

- Click **Finance > Account Payable > Invoice**

1 → Creates **Add New Supplier** entry form for data entry

2→ displays previously registered **Supplier**

3 → displays editing operation buttons(edit, Detail , Delete)

4→ navigation that return back to previous page

5→ A search button that enables to search suppliers by name or type

Figure 63: Invoice form

- In the list of **Invoice** form**,** Click **Add New Invoice**
- In the create new **Invoice** form**,** enter a supplier name
- In the **Type** field, select the **type** of invoice

- Enter and choose all other mandatory field information in the create new Invoice form
- Click save to save the information and exit the form

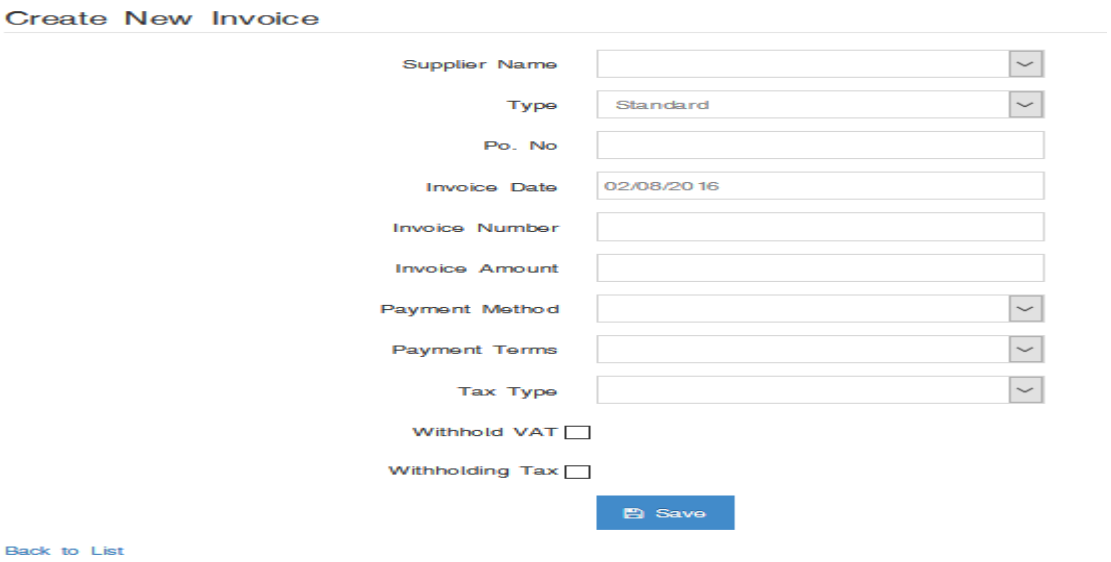

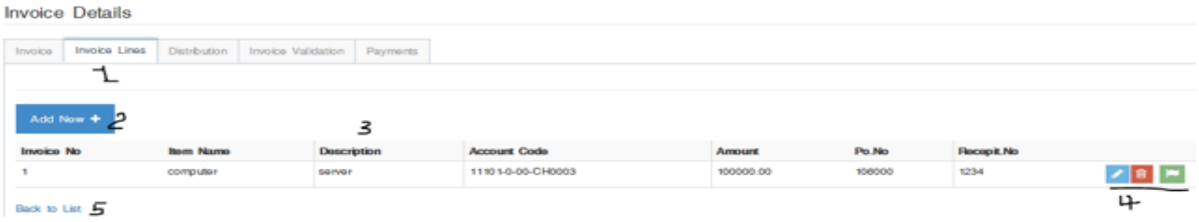

Figure 63: Invoice registration form

2.4.3.1. Create New Invoice Line

- Click **Finance > Account Payable > Invoice > Details > Invoice Line Tab**

1→Invoice Line tab

2→ Creates **Add New Invoice Line** entry form for data entry

3→ displays previously registered **Invoice Line**

4→ displays editing operation buttons(edit, Detail , Delete)

5→ navigation that return back to previous page

Figure 64: Invoice Line registration form

- In the **Invoice Detail form,** Click **Add New Invoice Line**
- In the create new **Invoice line** form**,** In the **Item** field**,** Select name of the **Item name**
- In the **description** field**,** Enter a short **description**
- In the **account code** field**,** select **account code**

- In the **amount** field**,** Enter **the number of Items**
- In the **Po. No** field**, enter Po. No**
- In the **Receipt no field,** enter the **Receipt no**
- Click save to save the information and exit the form

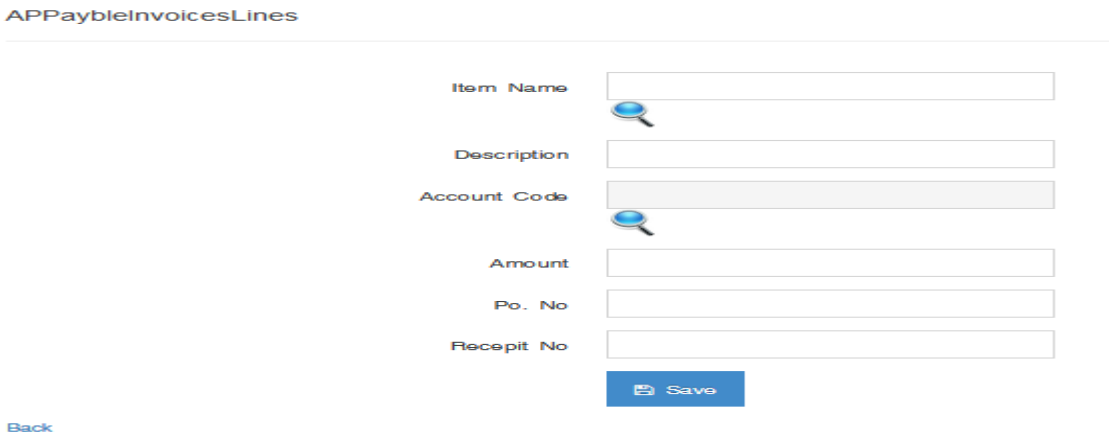

Figure 65: Invoice Line registration form

2.4.3.2. Create New Invoice Distribution

- Click **Finance > Account Payable > Invoice > Details > Distribution Tab**

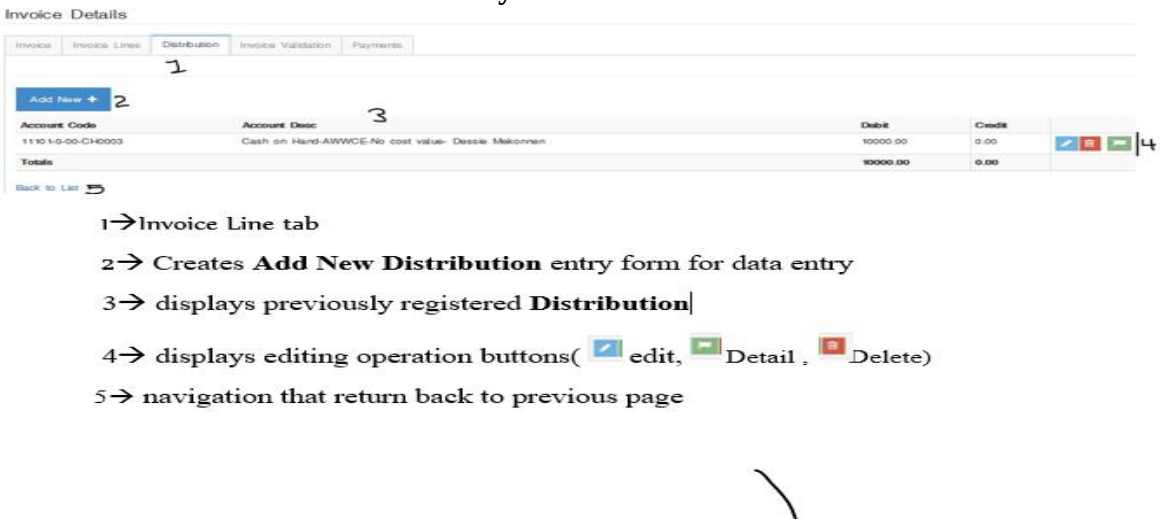

Figure 66: Invoice **Distribution** form

- In the **Invoice Detail form,** Click **Add New Distribution**
- In the create new **Distribution** form**,** In the **Account code** field**,** select **account code with account description,**
- In the **Debit** field**,** Enter the amount of **debit**
- In the **Credit** field**,** enter the amount of **credit**

- Click save to save the information and exit the form

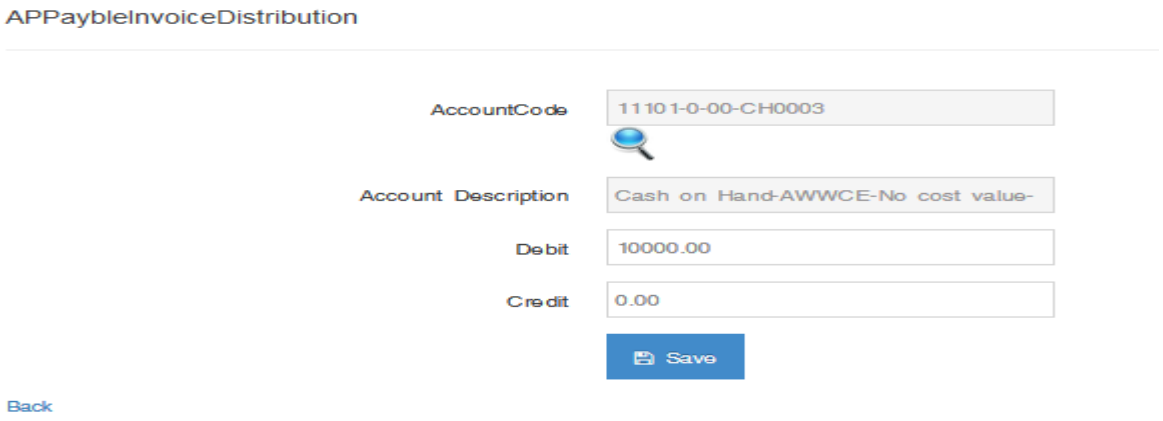

Figure 67: Invoice **Distribution** registration form

2.4.3.3. Create New Invoice Validation

- Click **Finance > Account Payable > Invoice > Details > Invoice Validation Tab**
- In the **Invoice Validation form,** Click **Add New Invoice Validation**
- In the create new **Validation** form**,** In the **Status** field**,** select **Approve to approve or Reject the invoice,**
- In the **Remark** field**,** Enter the Remark
- Click save to save the information and exit the form

2.4.3.4. Create New Payment

Before adding Invoice validation, you cannot add collection /payment

- Click **Finance > Account Payable > Invoice > Details > Collection Tab**
- In the **Payment Detail form,** Click **Add New Payment**
- In the **Payment amount** field**,** enter **the amount of cash,**
- In the **Payment Method** field**,** select the method of payment
- In the **account code** filed**,** select the account code
- Click save to save the information and exit the form

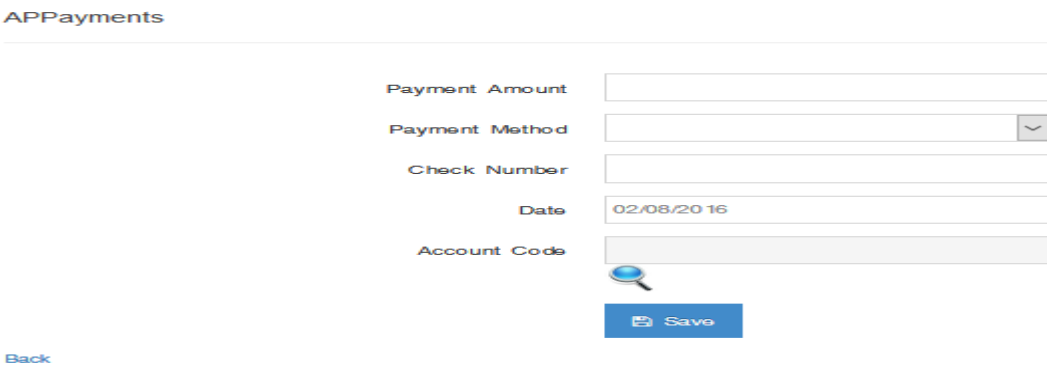

Figure 68: Invoice **Payment** registration form

2.5. Bank Reconciliation

This module helps to monitor a company's cash balance at bank and its cash balance according to its accounting records.

Topic /Forms	Description
Bank Reconciliation	Provides procedural information to maintain Bank Reconciliation schedule
Book Records	Provides procedural information to view already reconcile bank accounts.
Bank Records	Provides procedural information to maintane records at bank

2.5.1. Bank Reconciliation

- Click **Finance > Bank Reconciliation > Bank Reconciliation Schedule**

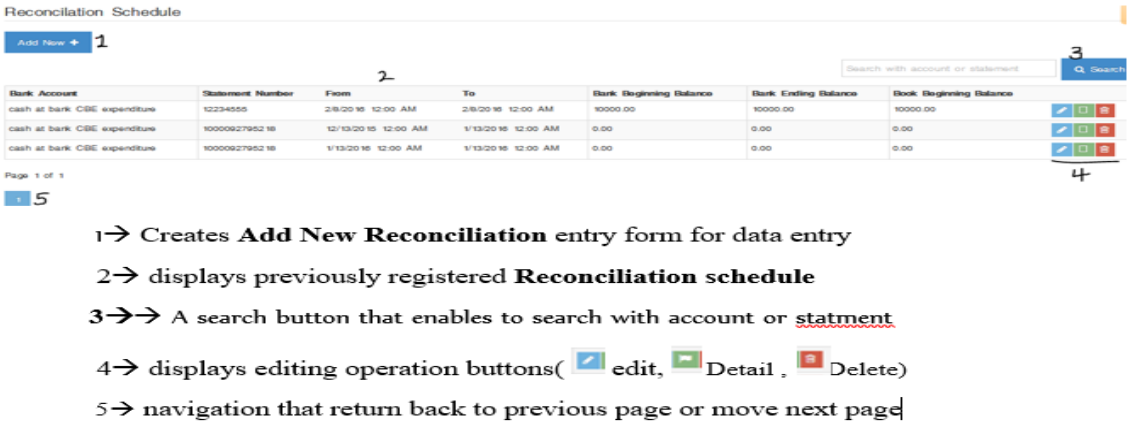

Figure 69: Invoice **Payment** registration form

- In the **Reconciliation schedule** form**,** Click **Add New Reconciliation schedule**
- In the create new **Reconciliation schedule** form**,** Select Bank Account
- In the **bank Number** field, Enter **Bank Number**
- In the **form and to** field, select the **bank statement date range**

- In the **Bank Beginning Balance** field, enter **Beginning Balance at bank**
- In the **Bank Ending Balance** field, enter **Ending Balance at bank**
- Click save to save the information and exit the form

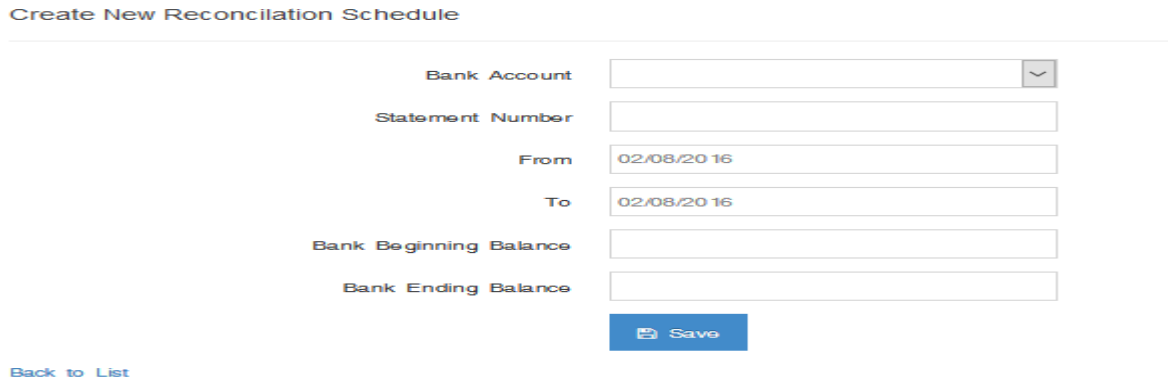

Figure 70: Bank Reconciliation registration form
